1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tanaka et al (as cited by applicant) in view of Bolash et al (as cited by applicant) , Redlich (as cited by applicant) and White et al .

Tanaka et al discloses driver circuit for stepper motor , where an H bridge circuit having first and second inputs , and first H bridge input connecting to output pwm signal and switching circuit having input connected to output pwm signal and switching output connected to second H bridge input , wherein switching performs an inversion of duty cycle of pwm see fig 5 , #506, #501-#504 and paragraph (0040) and (0002). Tanaka et al lacks disclosing microprocessor , switching circuit performing inversion of duty cycle when pwm signal is present and non inversion of duty cycle when pwm signal is not present, charge pump and sine table. Bolash et al discloses microprocessor se fig 1 , #22. Redlich discloses switching circuit performing inversion of duty cycle when pwm signal is present and non-inversion of duty cycle when pwm signal is not present , see col 5 liens 20-30, and col 2 liens 65-68. White et al discloses charge pump and sine table , see col 8 lines 15-20 and lines 40-45. It would have been obvious to one of ordinary skill in the art to combine the circuit of Tanaka et al with microprocessor of Bolash et al since microprocessors are common for pwm input, and switching circuit of

Redlich and charge pump and sine table of White et al for improved control an for less wasted power.

3. Claims 20-29 are allowed.
